

We've had Solar Photovoltaic panels installed at our school

As you may already know, our school was successful in the British Gas mySolar School programme and we have recently had free Solar Photovoltaic panels installed on our roof.

The Solar PV panels are really important for our school as they will help us reduce both carbon emissions and cut down on our annual energy costs. Importantly, they will also help us show our pupils the value of using energy sparingly and creating it from renewable sources wherever possible. Along with the panels, British Gas have installed a LCD display so we can see exactly how much energy, CO₂ and money our school is saving.

I hope you'll take the opportunity to take a look at the panels and the LCD display next time you visit the school.

British Gas are planning to install free Solar PV panels in further schools, so if you have children or relatives at other schools you can direct them to mysolarschool.co.uk to see how they could enter further phases of the programme.

If you're interested in making energy efficiency improvements at home or installing microgeneration technology such as Solar PV panels, then you can contact British Gas at **0800 048 1631**[^], quoting SWP0001.

Yours Sincerely,

[^] Phone lines are open Monday to Friday 8am - 5pm. Calls may be monitored and/or recorded for quality and compliance purposes.
